

# Video Recorder 600 Series from Bosch

## Qualified to give you complete control

**BOSCH**  
Invented for life

Schools, shops, hotels and business premises are among the many applications that can benefit from an efficient, convenient and flexible video management solution. The Bosch Video Recorder 600 Series is a complete video management solution for up to 8 or 16 cameras in a single compact unit. By linking several units together using the supplied Bosch Control Center PC software, you can have centralized control of multiple units - all of which can be operated from a single Bosch IntuiKey keyboard. Remote viewing has been made easy with the support for smartphones.

### **No training required**

Ease-of-use starts straight 'out of the box'. Simply connect it up, enter the language, date and time, and it begins recording automatically. Requiring no special training and minimal maintenance, the 600 Series works continuously and reliably.

### **Reliable, professional performance**

Available with or without an integrated DVD writer and in a variety of storage capacities, the 600 Series features a highly reliable embedded design that minimizes maintenance and reduces operational costs.

The 600 Series utilizes highly efficient H.264 compression to deliver excellent image quality while significantly reducing bandwidth and storage requirements. It provides full real-time recording in CIF (DVR630/650) or 4CIF (DVR670) resolution simultaneously on all channels. If you need to capture even more details, the DVR630/ 650 is able to record 4CIF resolution with lower frame rate.

Whatever your system needs, the 600 Series has the flexibility and performance to provide a professional and reliable solution.

Looking for an affordable, easy-to-use video management solution that gives you complete system control? You've found it in the Video Recorder 600 Series.

### Making it easy

The 600 Series has several features to help security operators work efficiently and effectively. Events can be captured by triggering inputs or motion detection, and you can even choose to receive an e-mail notification with a short video clip automatically when an event occurs. Overwrite protection safeguards your critical recordings, while 'Smart Search' helps you find key events in recorded video very quickly by looking for changes in a selected area. You can compare past and present events by simultaneously viewing live and playback scenes.

The 600 Series also offers you remote monitoring, allowing you to manage your video and digital recording systems from any location via LAN, WAN or the internet. You can view live directly from web-enabled mobile devices.

All video is digitally watermarked to ensure the credibility of your recordings. An archive player with image authentication allows you to access scenes on any PC, without needing to install additional player software.

### Freedom of choice

Choose from several control methods – IntuiKey keyboard, mouse, infrared remote control or just use the 600 Series front panel directly. These options are complimented by an intuitive user interface and flexible remote management options including Bosch Control Center software, a zero install web client, and the new Bosch DVR Viewer App for live viewing and PTZ control via Apple iOS devices. Now you can easily view video and manage your surveillance solution from anywhere in the world.

### Features

Out-of-the-box solution

Simultaneous viewing of live and playback images (compare), Smart Search, email event notification with 10-second video clip on alarm

Compatibility with Bosch CCTV keyboard, Bosch and third party dome and PTZ cameras

Various control and input options including mouse, CCTV keyboard, front panel and IR remote control

Real-time recording and playback in CIF (DVR630/650) or 4CIF (DVR670) resolution

4:3 and 16:9 monitor aspect ratio support

Control Center software and web-based application for centralized viewing, playback, export and configuration

Bosch DVR Viewer app for iPhone/iPad/iPod touch devices

### Benefits

Easiest set-up and configuration with no special training needed

Time-saving and hassle-free management of recorded video and fully automated event notification via email with 10 second video clip attached

Flexible and easy control and installation of movable cameras

Easy, flexible operation options to suit any application

High quality live and recorded pictures deliver the important details in quickly changing scenes

Extends compatibility to include high definition wide screen monitors

Manage your CCTV system from anywhere in the world. All 400, 600 and 700 Series recorders can be controlled by one Bosch Control Center

View camera images and control connected PTZ cameras via your smart phone
